Journal of Agriculture and Farmer,

St. Louis, December, 1877.

To Publishers:

as an exchange for 1878, we will send it to you, if you will publish the enclosed prospectus and notice, one or more times, as you may feel disposed, in your publication, sending marked copies of same. On receipt of the first issue we will enter you as an exchange for 1878. The Journal of Agriculture and Farmer, now in its 18th volume, has a circulation of 14,500 copies per week, issuing over three times as many papers each week as any agricultural publication in St. Louis. We shall be glad to have your co-operation in extending its circulation in your section, and we will furnish it to you at \$1.15 net per annum, for clubbing purposes—you offering the two papers together, though not naming our terms to you.

If you conclude to club our paper with yours, we would suggest that you keep the terms in a conspicuous place, so it may be of advantage to all parties. The terms we give you are very low, lower than any other first class agricultural paper is furnished, and, by giving the terms publicity, the two papers being placed at a very low figure, will no doubt add to your list of subscribers. Hoping you may consider this favorably,

We are yours fraternally,

CHEW & HARNESS, Publishers.

Steights knowstrus apple. DEC. 18 to Lunday last ? Examined the apples Sent by Prof. Leigh of as nearly as I can realled they presented the following peculiareties The apples own LAB Small Labout 1/2 in d'am. _ I coule hol detect two corro- there was only one set of 5(?) ovaries- which the cells of which were truear. I not Containing Leeds & were about 4 times on long or ordinary apple Leed- The Upper porture of both (?) apples was worm salen, so That here have have been traces of the ripper 10 moning which were not spring.
